

Sed Commands

Options	Description
q	Exit sed without processing any more commands or input.
d	Delete the pattern space; immediately start next cycle.
p	Print out the pattern space (to the standard output).
a	Appending text after a line.
i	insert text before a line.
=	Print out the current input line number (with a trailing newline).
c	Replaces the line(s) with text.
w	Write the pattern space to filename.
z	Empty the content of the pattern space.
D	Delete text in the pattern space up to the first newline, restart cycle if pattern space contains newlines.
e	Execute the command that is found in the pattern space.
F	Print the file name of the current input file.
r	Reads file filename.
n N	Read/append the next line of input into the pattern space.
W	Write the first line of the current pattern space to filename
x	Exchange the contents of the hold and pattern spaces.
y/src/dst/	Transliterate any characters in the pattern space.

Command Options

Options	Description
-i[SUFFIX]	Edit files in place (make backup if SUFFIX supplied).
-n	Suppress automatic printing of pattern space.
-f	add the contents of script-file to the commands to be executed
-e	Execute multiple sed commands
-r or -E	Use extended regular expressions (supports '+', '(', ')').
-s	Consider files as separate rather than as a single, continuous stream.
-c	Copy the input to the standard output.
-l	pecify the desired line-wrap length for the l command.

Command Flags

Flags	Description
g	Global substitution - Replace all occurrences in each line.
e	Execute shell command after substitution.
w	Save only the substituted lines to a specified file.
l	Perform case-insensitive pattern matching.
p	Print only the substituted lines.
1,2,4,...	Substitute the nth occurrence- Replace specific occurrence of a pattern.

●●●

BASIC EXAMPLES

```
# Delete the second input line
$ seq 3 | sed 2d

# print only the second input line
$ seq 3 | sed -n 2p

# Insert text before a line.
$ sed '/warning/i # This is a warning' logfile

# Group several commands together.
$ sed -e '{s/server/new-server;/s/port/8080/;}' config.-conf

# Write the pattern space to f-ilename.
$ sed -n '/important/w important_lines.txt' logfile

# Substitute matched string with new string
$ sed 's/old/new/' config.conf
```

●●●

REPLACING TEXT

```
# Replace all occurrences of a string
$ sed 's/old/new/g' file.txt

# Replace the string on the 4th line
$ sed '4 s/old/new/' file.txt

# Replace the third occurrence of a string
$ sed 's/old/new/3' file.txt

# Remove all whitespace from beginning of each line
$ sed 's/^\s*//' file.txt

# Replace text on the line the begins with hello
$ sed '/hello/s/world/universe/' file.txt

# Remove "" from the end of each line
$ sed 's/\\$//' file.txt
```

●●●

APPEND AND PREPEND TEXT

```
# Search text and print matched lines
$ sed -n '/hello/p' file.txt

# Perform case insensitive search
$ sed -n '/hello/lp' file.txt

# Inverse search, only print unmatched text
$ sed -n '/hello/!p' file.txt

# Append line after line 2
$ sed '2a Text after line 2' file.txt

# Append line at the end of the file
$ sed '$a THE END!' file.txt

# Insert "Example: " before each line that contains "hello"
$ sed '/hello/i Example: ' file.txt
```

●●●

DELETING LINES

```
# Delete line 1-4 in file
$ sed '1,4d' file.txt

# Delete every 4th line starting with line 6
$ sed '6~4d' file.txt

# Delete last line in a file
$ sed '$d' file.txt

# Delete lines starting with "Errors"
$ sed '/^Errors/d' file.txt

# Delete all empty lines
$ sed '/^$/d' file.txt

# Delete lines starting with "#"
$ sed '/^#/d' file.txt

# Delete the 3rd line in a file
$ sed '3d' file.txt
```

●●●

OPTIONS EXAMPLES

```
# Print only lines containing 'error' in a log file
$ sed -n '/error/p' syslog.log

# Replace 'server-01' with 'server-02' and 'port=8080' with 'port=9090' in a configuration file
$ sed -e 's/server-01/server-02/' -e 's/port=8080/port=9090/' app.conf

# Replace 'old-version' with 'new-version' in a configuration file and create a backup
$ sed -i.bak 's/v3.3.2/3.4.1/' app.conf

# Use extended regex to match and replace multiple words
$ sed -r 's/(error|warning)/info/' syslog.log

# Replace 'hostname' in each file separately in a directory
$ sed -s 's/hostname/server/' /etc/*.conf

# Copy the content of a file to another file
$ sed -n -e '1,5c' -e 'This is a new line.' source.txt > destination.txt

# Use a script file to replace multiple patterns in a file
$ sed -f replace_patterns.sed config.txt
```
