

SQL JOINS Cheat Sheet

```
1 SELECT *  
2 FROM A  
3 INNER JOIN B ON A.key =  
  B.key;
```

INNER JOIN

Retrieves rows where there is a match between tables A and B based on a common key.

```
1 SELECT *  
2 FROM A  
3 FULL JOIN B ON A.key =  
  B.key;
```

FULL JOIN

Retrieves rows where there is a match in either table A, table B, or both, including all data from both tables.

```
1 SELECT *  
2 FROM A  
3 FULL JOIN B ON A.key = B.key;  
4 WHERE A.key IS NULL OR B.key  
  IS NULL;
```

FULL JOIN (WITH NULL CHECK)

Retrieves rows where there is no match between tables A and B, capturing only unmatched rows from both tables.

```
1 SELECT *  
2 FROM A  
3 LEFT JOIN B ON A.key =  
  B.key;
```

LEFT JOIN

Returns all rows from table A, along with matched rows from table B. Rows in A without a match in B will still appear, with NULL values for B's columns.

```
1 SELECT *  
2 FROM A  
3 LEFT JOIN B ON A.key =  
  B.key;  
4 WHERE B.key IS NULL;
```

LEFT JOIN (WITH NULL CHECK)

Selects rows from table A that do not have a corresponding match in table B, filtering out only unmatched rows.

```
1 SELECT *  
2 FROM A  
3 RIGHT JOIN B ON A.key =  
  B.key;
```

RIGHT JOIN

Returns all rows from table B, along with matching rows from table A. Rows in B without a match in A will still appear, with NULL values for A's columns.

```
1 SELECT *  
2 FROM A  
3 RIGHT JOIN B ON A.key =  
  B.key;  
4 WHERE A.key IS NULL;
```

RIGHT JOIN (WITH NULL CHECK)

Selects rows from table B that lack a corresponding match in table A, isolating only unmatched rows.
