

TCP 3-WAY HANDSHAKE

KEY POINTS:

Sequence Numbers:

Both sides select an initial sequence number (ISN) during the handshake. Acknowledgment numbers are used to confirm receipt and synchronize the communication.

Flags Involved:

SYN: Initiates a connection.

ACK: Acknowledges receipt of a segment.

SYN-ACK: Combines SYN and ACK, used by the server to respond to the client.

Reliability:

Ensures both sides agree on the connection parameters. Provides a mechanism to recover from lost or out-of-order packets.

Step 1 Synchronize

Step 2 Synchronize-Acknowledge

Step 3 Acknowledge
