

LINUX TERMINAL SHORTCUTS

CTRL + A

Move the cursor to the beginning of a line

CTRL + E

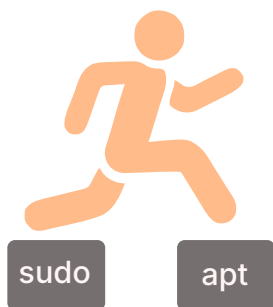

Move the cursor to the end of a line

CTRL + R

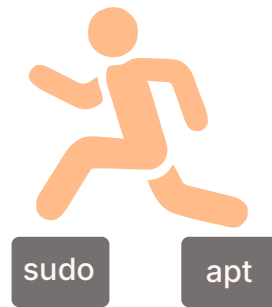

Let's you search the previously used commands.

CTRL + →

Move cursor forward one word on the current line. Same as ALT + F.

CTRL + ←

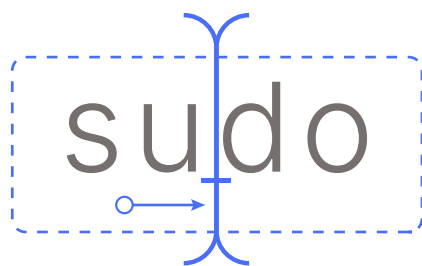

Move cursor backward one word on the current line. Same as ALT + B.

CTRL + U

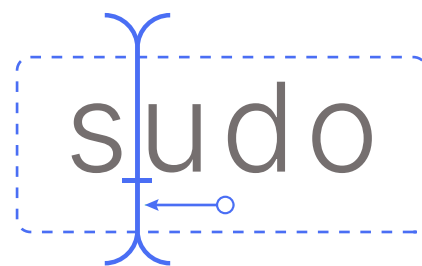

Cut the entire line from the cursor position to the beginning, adding it to the clipboard

CTRL + F

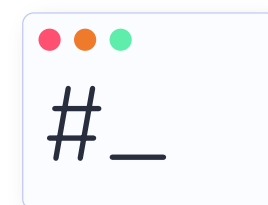

Move cursor forward one character on the current line. Same as forward arrow.

CTRL + B

Move cursor backward one character on the current line. Same as backward arrow.

CTRL + L

Instead of writing C-L-E-A-R, you can simply use Ctrl+L to clear the terminal.
